On May 20, 2000 this sequence version replaced g1:7940350.
Because these overlapping clones came from different libraries there are numerous instances of insertions, deletions, and single nucleotide polymorphisms in the overlapping regions below.

                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     * NOTE: This is a 'working draft' sequence. It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          * 17960 25939; contig of 8980 bp in length 26940 27039; gap of 100 bp in length 27040 36269; contig of 8980 bp in length 36270 36368; gap of 100 bp in length 48875 48674; contig of 12205 bp in length 48875 62315; contig of 13205 bp in length 62316 62415; gap of 100 bp in length 77558 7757; gap of 100 bp 5685 96844; contig of 1927 bp in length 96885 124230; contig of 1927 bp in length 124231 124330; gap of 100 bp 100 bp

It currently consists of 13 contigs. The true order of the pleces is not known and their order in this sequence record starbitrary, daps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Submitted (09-NOV-1999) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA on Mar 12, 2000 this sequence version replaced gi:6479088.

All repeats were identified using RepeatMasker:

Smit, A.F.A. & Green, P. (1996-1997)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      On Mar 1, 2000 this sequence version replaced gi:6958024.

Because these overlapping clones came from different libraries there are numerous instances of insertions, deletions, and single nucleotide polymorphisms in the overlapping regions below.

                                                                                                        on Sep 25, 1999 this sequence version replaced gi:5919292.
Because these overlapping clones came from different libraries there are numerous instances of insertions, deletions, and single nucleotide polymorphisms in the overlapping regions below.

Because these overlapping clones came from different libraries there are numerous instances of insertions, deletions, and single nucleotide polymorphisms in the overlapping regions below.
